

MEDICARE CONNECT (PTY) LTD
SOC 2 CLOUD CONTROL IMPLEMENTATION REPORT
AWS Free Tier Technical Evidence Mapping

Classification : Confidential
Version : 1.0
Date : March 2026
Author : Patrick Mohlala, GRC Analyst
Distribution : CEO, IT Manager, Information Officer

1. EXECUTIVE SUMMARY

This report presents the results of mapping AWS Free Tier security configurations to SOC 2 Trust Services Criteria , with cross-mapping to ISO/IEC 27001:2022 and POPIA Section 19.

The sandbox demonstrates that core technical controls can be implemented and evidenced:

- MFA
- Password policy
- CloudTrail logging
- S3 encryption
- Public access blocking
- Restrictive network rules
- Monitoring alarms
- Backup configuration

Result snapshot:

- Controls mapped : 18
- Implemented : 11
- Partial : 7
- Missing : 0
- Evidence artifacts indexed: 12

2. BUSINESS PROBLEM

Projects 1 to 4 produced strong governance documentation.

A remaining gap was technical operating evidence.

Without screenshots and control mapping, MediCare Connect cannot convincingly answer customer security questionnaires or internal audit requests about cloud safeguards.

3. OBJECTIVES

- Configure a low-cost AWS sandbox
- Implement foundational security settings
- Map settings to SOC 2, ISO 27001, and POPIA
- Collect reusable evidence artifacts
- Identify residual gaps and a 30/60/90 plan

4. SCOPE

In scope:

- AWS Free Tier account security settings listed in the Scope Document

Out of scope:

- Real PHI/PII
- Formal external SOC 2 Type II examination
- Enterprise multi-account architecture

5. METHODOLOGY

Step 1: Define scope and success criteria

Step 2: Configure AWS Free Tier controls

Step 3: Capture screenshots and complete Evidence Artifact Log

Step 4: Complete Control Matrix in Google Sheets

Step 5: Rate each control as Implemented / Partial / Missing
Step 6: Document gaps and roadmap
Step 7: Produce this implementation report

6. CONTROL THEMES COVERED

- Identity and access management
- Privileged access protection (MFA)
- Audit logging and monitoring
- Encryption and data exposure prevention
- Network restriction
- Backup readiness
- Accountability and oversight

7. KEY FINDINGS

7.1 Strengths:

- Root MFA enabled
- IAM password policy configured
- CloudTrail enabled with log validation
- S3 default encryption enabled
- S3 Block Public Access enabled
- Security groups documented as restrictive
- Evidence IDs assigned and traceable

7.2 Partial / Improvement Areas

- Continuous detection content is basic (CloudWatch only)
- Formal quarterly access certification process still manual
- Backup restore test evidence not yet completed
- No CSPM tool for continuous misconfiguration monitoring
- Change management ticket linkage is lightweight

8. COMPLIANCE INTERPRETATION

SOC 2:

Provides evidence toward Security criteria around logical access, monitoring, and risk mitigation.

ISO 27001:2022:

Supports Annex A themes including access control, logging, cryptography, network security, and backup.

POPIA:

Supports Section 19 expectations for appropriate technical and organisational measures to protect personal information.

9. BUSINESS IMPACT

With this evidence pack, MediCare Connect can:

- Respond faster to security questionnaires
- Show auditors technical proof, not only policies
- Reduce onboarding delays with enterprise customers
- Strengthen POPIA accountability narrative for cloud systems

10. 30 / 60 / 90 DAY ROADMAP

30 Days

- Enforce MFA for all IAM users
- Finalise IAM access review checklist
- Enable additional S3 access logging where relevant

60 Days

- Add AWS Config rules for encryption and public access
- Perform and document one backup restore test
- Improve log retention and alerting design

90 Days

- Evaluate CSPM tooling
- Publish cloud shared responsibility matrix to vendors/internal teams
- Conduct external SOC 2 readiness discussion

11. CONCLUSION

Project 5 closes the gap between documented GRC processes and technical proof.

It demonstrates practical ability to implement, evidence, and report cloud controls in language auditors and recruiters understand.
